Looks good so far
I don't see a layer in the TOC for the identified feature in the picture below

Hi, Kris:

Attached is the viewer code.

Added the spill trace widget in it.

I think you need to change the proxy setting in viewer.js for both secure service and the arcgis online login.

Also it should include the ERT token check code to be embedded in osc.net.

The identify tool is on for all layers, we can customize it if needed.

Thanks.

Long

Thanks Raj, see how best to add a raster service to the JS API.

I can check out on this.

Guys – I suggest we let Janine focus on coordination, and we provide technical support.

Thanks

No its just a Raster Service. There should be a way to add it or add it as a base map option?

Hi, Janine:

The second service is raster layer, is there any alternative? Kml or something?

Never done images in CMV, but kml should work.

Let me know.

Thanks,

Long

Ok long here are the services to add.

Activate the identify tool, we will make custom popups after I look at it a little better.

I got the photos and mov files in RM last night.

For mapping, I am waiting for the service.

Thanks.

Still need help getting the photos in?

I am at COOP, Long let me know when you are ready to deploy to production.

Thanks :) I already used it. Eric and I have really been using the viewer...its AWESOME!

I am going to need a site specific viewer set up next. I am working on the services right now that we will load and will send them when I am done.

Can you get with Kris in the AM to get one on production? He will be heading to the COOP tomorrow for 8.

Lets call it "Gold King Mine Release – Region 6"

Lets put the authentication widget on it that will allow us to embed into OSC.net.

Hi, Janine:

Should be in RM, the mov file is in the data file module, photos are in er photo grid.

Event/incident name = Gold King Mine Release

Please double check it.

Also we can put the spill/stream trace js map viewer widget in use for this event, ☺

Thanks.

Awesome thanks. We need to start a new Response Manager Site and load photos and movies to the ER photos module to start, hopefully they will have embedded coorindates.

Ill send you the RM information and the photos

Subject: Region 6 ER Activation

Region 6 has activated for a 1 million gallon spill of acid mine waste that has
originated in R8 but is moving towards NM and the Colorado River. R8 is already

responding and we have begun coordinating with them. We (R6) are heading out to New Mexico this am to get water samples before the spill makes it into the region for sampling. We are sending four people.

This is a heads up we may need data management support over the weekend and most likely someone at the REOC next week.
